Dr. Frank Embs Director of New Business Development Auriga Polymers Incorporated 4235 South Stream Blvd., Suite 450 Charlotte NC 28217

Dear Dr. Embs:

APR, the Association of Postconsumer Plastic Recyclers, is pleased to recognize PolyClear® EBM PET . 5507 from Indorama Ventures as meeting or exceeding the APR PET Critical Guidance Document protocol and hereby so states.

A Review Committee, appointed per the APR Recognition Operating Procedures, reviewed your April 22, 2015 data submission and concluded the data were correctly obtained by a qualified laboratory and completely presented to show PolyClear<sup>®</sup> EBM PET 5507 resin meets or exceeds all critical guidance.

The PET Critical Guidance Document is the product of multi-industry consensus of key issues related to the recycling of postconsumer PET bottles. The Document directs innovators to conduct specific testing per established testing procedures and then provides the innovator with guidance to interpret the results. The APR recognition is based on the innovation meeting or exceeding the most challenging test conditions and strictest guidance criteria.

APR thanks Indorama Ventures for its cooperation in using this important protocol. The protocol is intended to improve the quality of recycled bottles by helping innovators to make informed decisions about the consequences of PET bottle innovations. The impact of this protocol is beneficial to world-wide recycling efforts.

Our recognition applies to PolyClear® EBM PET 5507 resin from Indorama Ventures and the bottle body made from the neat resin. Commercial bottles with possible additions to the resin and labels and closures would need to be tested themselves to demonstrate the complete package conforms to the APR Critical Guidance Document for APR recognition to apply to a commercial bottle. Meeting the Critical Guidance Document guidelines is a truly significant step in demonstrating overall recyclability of your resin.

Yours truly,

Steve Alexander

APR Executive Director
